Sustainable procurement is an important lever to manage supply risks and achieve an organization’s social, environmental and economic goals. It also increases the economic efficiency of organizations by considering the real cost of the products and services they acquire, in addition to the purchase price.

It is a tangible method to contribute to the local and social economy, support supply chain innovation and diversity, promote clean technologies and contribute to the circular and low-carbon economies.

In its 3rd edition, the Barometer has become a reference to evaluate sustainable procurement progress and identify levers for improvement within organizations.

Regardless of your level of experience, the Barometer helps determine your practices and positioning and identify the actions to be taken in order to progress.

Each respondent will receive a confidential and personalized information sheet on their performance as compared to other respondents across Canada.

New themes were added to this year’s edition of the Barometer. They include United Nations Sustainable Development Goals (SDGs), with a focus on Goal 12: ensure sustainable consumption and production patterns.

Based on the results of the study, recommendations will be presented to the government of Canada to ensure the procurement strategies of Canadian organizations contribute to the SDGs.

Sustainable procurement is an important lever to manage supply risks and achieve an organization’s social, environmental and economic goals.

It also increases the economic efficiency of organizations by considering the real cost of the products and services they acquire, in addition to the purchase price.

It is a tangible method to contribute to the local and social economy, support supply chain innovation and diversity, promote clean technologies and contribute to the circular and low-carbon economies.

NO SUSTAINABLE DEVELOPMENT OR CORPORATE RESPONSIBILITY APPROACH IS COMPLETE WITHOUT PROCUREMENT.

The 2020 edition measures progress in Canada.

A strong network of organizations that contribute to value creation by fostering sustainable procurement and sustainable development throughout their supply chains, the Espace de concertation sur les pratiques d’approvisionnement responsable (ECPAR) provides assessments, tools, support and opportunities for exchange.
